

Every yard and every peso, accounted for.

The brand and interface guideline for the Yamban Shop System: sales, inventory, income and expense, and orders for a sublimation and tailoring shop. Version 0.1, October 2026.

The tape gauge is the product's signature. It is the one place this guideline spends boldness; everything around it stays quiet.

What makes it different

Most shop software is built for one of two businesses: a counter that sells finished items, or a print shop in another country that quotes online and takes card deposits. Yamban is neither. Its records show a shop that buys cloth by the roll, prints with sublimation ink, sews in-house, and is paid by schools, faculties, parishes, police stations and teams in instalments through GCash, BDO, cheque and cash. The brand comes from those four facts.

It measures cloth, not units

An order for twenty medium basketball jerseys is not twenty items leaving a shelf. It is thirty yards of Polydex cut from a seventy-eight-yard roll. The system deducts fabric per garment size, so the interface speaks in yards and rolls, and shows what is left on the roll in the same terms a cutter uses.

It knows what a jersey really cost

Each order carries its own cost: fabric, sublimation ink, electricity for the heat press, and labour. The interface always shows cost beside price, so a good month on the debit side can be checked against what it consumed.

It is built around the balance, not the sale

Institutional orders arrive with a down payment and settle weeks later. The most important number on any order is what is still owed, so the balance is the largest figure on every order view and has its own colour tier between unpaid and paid.

It keeps the ledger the shop already trusts

The shop's books run debit for collections and credit for expenses, by month, with categories for materials, meals, salary, diesel and toll, and utilities. The system keeps that structure and vocabulary rather than replacing it with generic accounting screens. It also closes the gap the spreadsheet could not: in February, **₱57,659.00** of expenses had no category and fell out of the category totals. The interface does not allow an uncategorised expense to be saved.

Category analysis

Not sourced from Mobbin: the Mobbin connector returned a paid-plan error, so no screens are cited. This section is drawn from public product pages for Printavo and Loyverse and from the shop's own spreadsheet. Treat it as analysis, not benchmark evidence.

Convention in the category	Decision	Reason
Order list shows payment status at a glance with coloured statuses (Printavo)	Adopt the structure	Owners scan for who still owes. Restricted to the four payment tiers below, never user-defined colours.
Deposit collected before a job reaches production (Printavo)	Adopt	Matches how the shop already works: down payment, then production, then full payment.
Expenses recorded at shop level or against an order (Printavo)	Adopt, with the shop's own categories	Per-order cost is a core differentiator; categories come from the ledger, not a template.
Custom, user-picked status colours (Printavo)	Reject	Every custom colour is untested contrast and a new meaning to learn. Four tiers cover payment; production stages stay neutral.
Online quote-approval page for customers	Defer	Customers currently order through Facebook and in person. Revisit when customer-facing pages are planned.
Product tile grid for fast counter checkout (Loyverse)	Reject	Orders are batches with size runs and rosters, not single-item sales. The working screen is a list of orders, not a till.
Inventory counted in units with low-stock alerts (Loyverse)	Adapt	Keep the alert; change the unit to yards per roll and show it as a tape gauge.
Loyalty points and marketing SMS (Loyverse)	Reject	Repeat customers are institutions on budgets, not shoppers collecting points.

Principles

Each principle has a check. A principle without one is a preference.

Principle	Check
Balance before total. Any order view shows the balance due first and largest.	Order detail and order list: balance column precedes total; balance uses the largest numeric size on the view.
Fabric is shown in yards and rolls, never in pieces.	No inventory quantity for a fabric item renders without the <code>yd</code> unit.
Every peso is typeset the same way.	All amounts use <code>.yb-money</code> and the <code>₱</code> sign. <code>grep -rnE "PHP [0-9] \bP [0-9]{1,3}," resources/</code> returns nothing.
No uncategorised money.	The expense form has no save path with an empty category. The monthly summary shows a category gap of ₱0.00 .
Colour carries payment and stock meaning only.	No colour token outside the neutrals and <code>primary</code> appears on an element that is not a payment state, stock state or negative amount.

Colour

The palette is taken from the shop floor. The canvas is the white of Polydex before it is printed. Text is press ink. The primary is sublimation cyan, deepened until it can carry text. The partial tier is the yellow of a tailor's measuring tape, because a part-paid order is a measurement in progress. Green is the ledger's paid column; red is tailor's chalk, used only for problems. Magenta, the other sublimation ink, belongs to the logo and printed material only.

Polydex white

--background #F3F5F6 / #101517
Canvas.

Press ink

--foreground #15191B / #E8EDEF
Text and amounts.

Cyan ink

--primary #0A5C7A / #5BBAD6
Actions, links, focus. Fill and text.

Tape yellow

--partial #F2C230 / #E8B931
Down payment received, balance open, low stock.

Ledger green

--success #1E6B3A / #5CBF7E
Fully paid.

Red chalk

--destructive #B3261E / #F2776C
Overdue, negative net, out of stock.

Magenta ink

--brand-magenta #B0125B / #E05596
Logo, receipt header, printed job ticket. No utility class.

Cutting table

--muted #E6EAEC / #212A2F
Table headers, used portion of a roll.

Measured contrast

Every ratio below is output from `contrast.py check tokens.json`, pasted unedited. Primary, partial, success and destructive are each checked twice: as a fill with their foreground on top, and as text on the canvas and on cards. In the light theme, tape yellow

used as text measures 1.53:1 on the canvas and 1.68:1 on a card (same script, pair mode), which is why `--partial-text` exists as a separate token.

[light]

PASS	16.18:1	need 7	foreground	on background	body text

ALL PASS

Dark theme

Dark is a translation, not an inversion. Surfaces lift by value as they come forward (canvas #101517, card #182024, muted #212A2F) instead of gaining heavier shadows. Accents lighten so they keep their contrast as text; fills take a dark foreground. Components should need no `dark:` overrides because every colour already comes from a token.

States

A palette with only success and destructive forces every "down payment", "partial" and "pending" state to improvise its own amber. The partial tier exists so that drift has somewhere legitimate to go.

Domain	State	Rendering	Rule
Payment	Quoted, no payment	Unpaid	Outline only.
Payment	Down payment received	Balance ₱12,500.00	Chip states the balance, not the word "partial".
Payment	Fully paid	Paid	Balance is ₱0.00.
Payment	Overdue	Overdue 14 days	Released or past due date with a balance. States the age.
Production	Layout, Printing, Pressing, Sewing, Ready, Released	Neutral text; current stage in primary	Stages never get their own colours.
Stock	Healthy / Low / Out	No mark / partial / destructive	Low means less than the largest open order needs.
Ledger	Negative net	-₱2,332.42	Expenses are not red. Only a negative result is.

Typography

Two families with separate jobs. Barlow Condensed is the jersey numeral: tall, narrow, sporting, and used for headings, size runs and roll scales. IBM Plex Sans does everything else, including all money.

Display 56

San Jacinto NHS

Heading 32

Order YB-2026-0142

Sub 22

Size run

Body 16

Basketball jersey, sublimated, with name and number.

Money 28

₱46,250.00

Small 14

Down payment received 2 Jul 2026 through GCash.

Barlow Condensed has no peso sign. This was verified against the font's character map: the glyph U+20B1 is missing, while IBM Plex Sans includes it in its extended Latin subset. Money in Barlow would fall back to another font mid-number. Plex Sans digits are tabular by default (every figure 600 units wide), so columns of amounts align without extra settings.

Formats

Value	Format	Example	Utility
Money	₱, comma thousands, always two decimals, no space	₱33,600.00	<code>money()</code> helper + <code>.yb-money</code>
Negative money	True minus sign before ₱, red chalk	−₱50,109.38	<code>.yb-money.neg</code>
Fabric	Yards, two decimals, unit always shown	1.50 yd	<code>.yb-measure</code>
Roll	Remaining yards, then roll length	26.00 of 78 yd	Tape gauge
Date (screen)	Day, short month, year	7 Mar 2026	Carbon <code>j M Y</code>
Date (export)	ISO	2026-03-07	Carbon <code>Y-m-d</code>
Order number	YB, year, four-digit sequence	YB-2026-0142	Model accessor
Sizes	Fixed order, uppercase	XS S M L XL 2XL 3XL	Size enum
Customer names	As entered; never auto title-cased	OLNP (KNIGHTS), SDO PANGASINAN	No <code>ucwords()</code>
Mobile number	+63 with spaces	+63 917 123 4567	Formatter
Payment method	Fixed labels	GCash, BDO, Cheque, Cash	Method enum

Components

Order row

Order	Customer	Balance	Total	Payment
YB-2026-0142	NATIONAL HS R1AA	₱12,500.00	₱14,200.00	Balance ₱12,500.00
YB-2026-0151	NIA OFFICE UNIFORM	₱0.00	₱33,600.00	Paid
YB-2026-0098	TEAM DEPAKERS	₱1,000.00	₱2,500.00	Overdue 21 days

Balance comes before total and is the heaviest figure. Names display as the shop entered them. Illustrative balances.

Payment tape

	Down payment ₱1,700.00 by GCash	Balance ₱12,500.00
	Full payment ₱33,600.00 by cheque	Paid

Size run

XS	S	M	L	XL	2XL	3XL
0	4	12	8	4	2	0

Under the run, the system states the fabric it will cut: 47.25 yd Polydex across all sizes. Illustrative: only the medium yardage (1.50 yd) comes from the shop's records so far.

Order cost

Fabric 52%, ink 24%, electricity 9%, labour 15%

Cost **₹6,120.00** against price **₹14,200.00**

The split uses ink, cyan and neutrals only. It never borrows the payment or stock colours.
Illustrative figures.

Buttons

Record payment

Print job ticket

One primary action per view. Button labels name the action; the confirmation repeats it ("Payment recorded").

Voice

Write like the shop's own ledger: short, specific, in the words the staff already use. Collections and expenses, not revenue and expenditure. Down payment and full payment. Bale for a cash advance, because that is what the salary sheet calls it. Sentence case everywhere.

Situation	Write	Not
Expense without category	Choose a category. Expenses without one are left out of the monthly totals.	Oops! Something went wrong.
Not enough fabric	Roll R-014 has 26.00 yd. This order needs 47.25 yd. Add a roll or split the order.	Insufficient inventory.
Empty order list	No orders this month yet. Record the first one.	Nothing to see here 
Payment saved	Payment recorded. Balance ₱12,500.00.	Success!

Refused patterns

These are the defaults this product will drift toward unless they are named. Each has a replacement and a grep.

Refused	Why	Use instead
<code>bg-indigo-600</code> , <code>bg-blue-600</code> buttons	The generic dashboard look; meaningless here.	<code>bg-primary</code> <code>text-primary-foreground</code>
<code>bg-green-100</code> <code>text-green-800</code> "Paid" pills	Off-palette, untested contrast.	<code>bg-success</code> <code>text-success-foreground</code>
<code>bg-amber-100</code> , <code>bg-yellow-200</code> for pending	Improvised partial tier.	<code>bg-partial</code> <code>text-partial-foreground</code>
<code>text-red-600</code> on every expense	Expenses are normal. Red means a problem.	<code>text-foreground</code> ; red only for negative net
<code>rounded-2xl</code> <code>shadow-lg</code> KPI cards with gradients	The SaaS card kit; hides the ledger.	Bordered surface, <code>rounded-surface</code> , no shadow
<code>\$</code> , <code>PHP</code> , <code>P</code> as currency	Inconsistent and wrong.	<code>₱</code> via <code>money()</code>
<code>font-mono</code> on amounts	Plex Sans is already tabular.	<code>.yb-money</code>
<code>font-display</code> on money	Barlow Condensed has no <code>₱</code> glyph.	<code>.yb-money</code>
Any pink or magenta utility	Magenta is reserved for the mark.	<code>.yb-mark</code> in allowlisted files only
Per-element <code>dark:</code> colour overrides	Duplicates the theme by hand.	Tokens switch automatically
Emoji in statuses, totals or empty states	Noise on a working screen.	Plain words
User-defined status colours	Unbounded meanings and contrast.	The four payment tiers

Implementation

Values live in one file, `yamban-tokens.css`, imported once in `resources/css/app.css`.
Tailwind reads the variables; it never holds hex values. Magenta is deliberately absent from the Tailwind map so it cannot spread to data-bearing elements.

```
// tailwind.config.js
export default {
  darkMode: ['selector', '[data-theme="dark"]'],
  theme: { extend: {
    colors: {
      background: 'var(--background)', foreground: 'var(--foreground)',
      card: 'var(--card)', muted: { DEFAULT: 'var(--muted)', foreground: 'var(--muted-foreground)',
      border: 'var(--border)', ring: 'var(--ring)',
      primary: { DEFAULT: 'var(--primary)', foreground: 'var(--primary-foreground)',
      partial: { DEFAULT: 'var(--partial)', foreground: 'var(--partial-foreground)',
      success: { DEFAULT: 'var(--success)', foreground: 'var(--success-foreground)',
      destructive: { DEFAULT: 'var(--destructive)', foreground: 'var(--destructive-foreground)',
      // brand-magenta intentionally omitted. Use .yb-mark.
    },
    borderRadius: { control: 'var(--radius-control)', surface: 'var(--radius-surface)',
    fontFamily: { display: 'var(--font-display)', sans: 'var(--font-body)' },
  } },
}

// app/helpers.php
function money(float $v): string {
  return ($v < 0 ? '-' : '') . 'P' . number_format(abs($v), 2);
}
```

Checks that can fail

```
# palette drift: raw Tailwind colours in views
grep -rnE "(bg|text|border)-(red|green|amber|yellow|blue|indigo|pink|fuchsia|rose)" resources/
# raw hex outside the token file
grep -rnE "#[0-9A-Fa-f]{6}" resources/ --include=*.blade.php --include=*.css | grep -vE "#[0-9A-Fa-f]{6}"
# magenta outside the allowlist
grep -rn "yb-mark|brand-magenta" resources/ | grep -vE "logo|receipt|job-ticket|yamban-shop"
# wrong currency
grep -rnE "PHP ?[0-9]|\\$[0-9]" resources/views
# contrast gate
python3 contrast.py check tokens.json
```

Each command should print nothing, except the last, which must end in ALL PASS. No codebase was audited for this version, so there is no drift baseline yet. Because colour

lives in variables, changing an accent later is a one-line edit in the token file.

Open decisions

These were not settled silently. Each needs your call.

Decision	Assumed for now
Product name. Is it "Yamban", or does the system get its own name?	Yamban Shop System
Front-end styling for the Laravel app	Tailwind via Vite with Blade
Interface language: English, Taglish, or Filipino	English with the shop's own terms kept (bale, down payment)
Threshold for low stock	Less than the largest open order needs
Whether the logo mark stays a magenta Y or becomes a drawn mark	Magenta Y in Barlow Condensed
Customer-facing pages (receipts, quotes)	Printed only; magenta header allowed there

Yamban Shop System guideline v0.1. Sources: the shop's 2026 ledger workbook; public product pages for Printavo and Loyverse.
